Breaking Access Barriers: Equitable Learning via Digital Health Platform

LAUNCH OF THE DIGITAL LIBRARY Marking a Milestone in Digital Transformation

Dated: 09.07.2025

Venue: Senate Hall, BFUHS, Faridkot.

Organized By

Central University, Baba Farid University of Health Sciences, Faridkot, Punjab

In Collaboration With

EBSCO Information Services, New Delhi, India

INTRODUCTION

In today's rapidly evolving educational landscape, equitable access to digital resources is no longer a privilege but a fundamental necessity. As health sciences education increasingly transitions into digital modes of delivery, the ability to access reliable, up-to-date, and inclusive learning platforms has become essential for both students and educators. Recognizing this critical need, **Baba Farid University of Health Sciences (BFUHS), Faridkot**, is organizing a **National Seminar on "Breaking Access Barriers: Equitable Learning via Digital Health Platforms"** on **July 9, 2025**, in collaboration with **M/s EBSCO Information Services, USA** (India Office).

This national-level seminar serves as a timely and strategic initiative to highlight the opportunities and address the challenges posed by the digital divide in medical and allied health education. The event will provide a vibrant forum for academic leaders, researchers, policy-makers, faculty members, and technology experts to deliberate on practical strategies, best practices, and collaborative solutions to ensure that digital health education is inclusive, accessible, and sustainable.

Discussions will also focus on the transformative role of digital libraries, open educational resources.

A major highlight of the seminar will be the **official launch of the BFUHS Digital Library** — a visionary step toward democratizing access to global academic and clinical knowledge across all affiliated institutions. Developed in partnership with EBSCO, a globally recognized leader in digital research solutions, the BFUHS Digital Library will offer seamless, 24/7 access to an extensive collection of scholarly journals, e-books, clinical reference materials, and educational databases. This initiative is expected to significantly enhance teaching, learning, and research capacities across disciplines.

The seminar marks a pivotal moment in the University's ongoing commitment to digital transformation, academic excellence, and equitable education. It reinforces BFUHS's vision of empowering faculty, students, and healthcare professionals with the tools and resources they need to thrive in an increasingly digital world. As we come together to explore and celebrate this transition, the seminar sets the stage for a future where healthcare education is not only advanced and innovative—but truly accessible to all.

BROAD TOPICS TO BE COVERED

- Digital Equity in Health Sciences Education.
- Transforming Medical Education Through Digital Platforms
- Digital Libraries and Knowledge Accessibility
- Harnessing EBSCO & Global Resources for Research and Learning.
- Telemedicine and e-Health Education.
- Building Digital Literacy Among Faculty and Students.
- Policy and Institutional Support for Digital Transformation.
- Ethical Use of Digital Health Information.
- Future Directions in Digital Health Education and Research.
- Success Stories and Best Practices from Leading Institutions.

REGISTRATION

Registration is completely free of charge, and all registered participants will receive certificate of participation upon attending the event.
